Eko Persiane external aluminum shutters

- Shutters made of extruded aluminum of varied thickness
- Fixed or movable slats depending on the model
- Mounting on a frame with a renovation fin or directly to the wall, depending on the model
- Concealed mounting screws and some hinges
- Choice of RAL colours and wood-like decors

Eko Persiane aluminum shutters offer a stunning Mediterranean design based on modern technologies and the durability of aluminium. Their appearance refers to the traditional styles of various Italian regions, and their technical parameters allow Eko Persiane to be used also outside the regions that inspired their creation.

Key features of Eko Persiane aluminum shutters:

- made of durable extruded aluminum of varied thickness within a single element
- varied installation and operation methods for shutters, tailored to the needs and preferences of investors
- possibility to choose colours from the most popular wood-like decors and RAL colours

Choose Eko Persiane aluminum shutters if:

- you are looking for an extraordinary addition to the building that will allow you to control sunlight, ensure privacy, and even effectively deal with street dust
- you are counting on a solution that refers to traditional aesthetics, where the presence of modern materials and installation methods will not disturb the character of the shutters
- you expect durability and reliability, and in the case of options with movable slats – quiet and smooth change of their position

Learn more about Eko Persiane aluminum shutters:

- equipped with self-lubricating, powder-coated aluminium hinges
- provide class 6 wind load resistance, guaranteeing the safety of the entire system
- can be equipped with 1- and 3-point locks
- all gaskets and nylon spacers are colour-matched to the colour of the shutter (5 shades to choose from)
- the standard colour palette consists of 23 RAL shades and 23 wood-like decors
- non-standard colours are available, priced individually
- shutter colours are covered by a ten-year warranty
- maximum height of a window shutter: 1800 mm
- balcony shutter height: 1800–2700 mm (larger ones, without dimensional warranty, require individual consultation)
- crossbar width: 80 or 100 mm (depending on the model)
- handle or espagnolette height on a door shutter: 1100 mm
- number of window or door shutter leaves: 1–4 (3- and 4-leaf versions priced individually by the Purchasing Department)

Available models

Angela

The ANGELA shutter is characterised by 50 mm rounded fixed slats, set at a 45-degree angle, separated by special nylon spacers available in various colours. The slat arrangement provides room lighting and free air flow, while guaranteeing privacy.

- sliding option available (by special order)
- leaves can be mounted directly to the wall
- possibility of mounting on frames with 45 or 62 mm renovation fins

Aurora

The AURORA shutter is distinguished by adjustable drop-shaped slats, which, thanks to a special connection system, allow for tight separation from the outside world, blocking even dust. Movable slats are also easier to clean, and their adjustment is quiet and smooth.

- sliding option available (by special order)
- leaves can be mounted directly to the wall
- possibility of mounting on frames with 45 or 62 mm renovation fins

Oscura

The OSCURA shutter is strongly inspired by traditional wooden shutters from the Verona and Mantua region. It has no visible frames on the outside. It is distinguished by vertical strips about 85 mm high, replacing typical slats.

- shutter frame visible only from the inside when the shutter is closed
- leaves can be mounted directly to the wall
- possibility of mounting on frames with 45 or 62 mm renovation fins

Selene

50 mm wide slats in the SELENE shutter are set at an inclined position to each other. There are powder-coated aluminium spacers between them. This design allows for subtle interior lighting with diffused light.

- closing with an espagnolette
- mounting with a frame with a 25 mm renovation fin
- 6 hinge colours matched to the shutter colours

Itaca

The 50 mm wide slats of the ITACA shutter are inclined towards each other, leaving room for diffused light, but effectively blocking dust settling. They are separated by aluminium powder-coated in a selected colour.

- handle closing
- mounting with a frame with a 25 mm renovation fin
- 6 hinge colours matched to the shutter colours

Nike

NIKE shutters were created as a sun protection system and a barrier for wind-borne dust. They are enabled by slats in the shape of water droplets, adjustable by a smooth mechanism.

- closing with an espagnolette
- mounting with a frame with a 25 mm renovation fin
- 6 hinge colours matched to the shutter colours

Atlante

The special water droplet shape of the adjustable slats of this shutter ensures its ability to effectively protect against sun and atmospheric phenomena, and even airborne dust. Its adjustment is smooth and harmonious.

- handle closing
- mounting with a frame with a 25 mm renovation fin
- 6 hinge colours matched to the shutter colours
