Eolis io – wind sensor

- manufacturer: Somfy
- bi-directional io-homecontrol® technology (feedback)
- potentiometer - 6 levels of wind threshold (up to 88 km / h)
- the LED on the sensor informs about the selected threshold level and the current wind speed below / above the set threshold
- the product does not require maintenance
- level of security: IPX4
- radio frequency: 868.00–869.70 MHz

The Eolis io wind sensor allows the automatic control of the outer shields depending on the wind strength to protect your installations. You can adjust its operation to the prevailing weather conditions by selecting one of the six wind thresholds. When the set threshold is exceeded, the drives connected with the sensor automatically move to the safe position. Depending on your individual needs, you can combine the Eolis io wind sensor with the Ondeis rain sensor, extending the range of system functionality.
