Eolis WireFree io

- manufacturer: Somfy
- radio communication
- battery power: 2 × LR6 (AA, 1.5 V)

The two-way radio wind sensor Eolis WireFree io allows you to send a signal to roller blinds, blinds and awnings in order to hide them when gusts of wind could pose a threat to them.

Eolis WireFree io is a fully wireless device. It can be mounted exactly where it is needed, because it does not need mains power – it uses 2 LR6 (AA) batteries.

The device allows you to set 3 different wind strength thresholds to protect screen blinds, blinds and awnings, which may differ in strength. One sensor can work with more different devices, provided that they are equipped with Somfy motors.
