ExitSafe output module

- producer: Elero
- charging voltage: 230 V
- output Voltage: 12 V

The ExitSafe output module fulfils a real need and legal requirement establishing the need for an alternative power supply and shutter control system in the event of a fire or a power outage. When the power supply from the mains fails and it is necessary to leave the building through an emergency exit separated by shields, the device allows them to be lifted autonomously. The ExitSafe output module can be triggered manually or activate itself when smoke is detected.
