

External aluminum shutters

- ✓ types of external shutters: side-hung, tilt and fold or sliding
- ✓ types of slats: adjustable or fixed at a specific angle
- ✓ painting in chosen RAL colours
- ✓ available with selected decor options

Aluminium external shutters are a modern product that refers to traditional design. Installed on the building façade, these window covers offer excellent functionality, allowing control over the amount of light and heat inside while ensuring privacy. At the same time, they are also an extraordinary addition to any façade, providing it with a unique character.

Key features of aluminium external shutters:

- sturdy frame made from extruded aluminium, ensuring durability and rigidity of the external shutters
- option to use adjustable or fixed slats, providing robust coverage
- classic side-hung fittings suitable for standard openings, as well as tilt and fold and sliding fittings ideal for larger projects

Choose aluminium external shutters If you:

- want to highlight your building while ensuring privacy inside
- need extra protection from rain, sun and mechanical influences for your windows

- appreciate modern architecture and the aesthetic appeal of aluminium with its versatile color and decor options
