

INFINITI ZERO – Renovation installation system

- ✓ panel thickness: 40 mm
- ✓ available for R and X systems
- ✓ possibility of assembly without side space and/or header

5.5 m*

maximum width

3 m

maximum height

INFINITI ZERO is a solution that allows the installation of a sectional garage door in the R or X system in garages without side space and/or headroom. Special mounting elements create additional space between the wall and the guiding rails, after which the door is installed in the usual way. This makes it possible to use INFINITI doors in renovation projects and in buildings with the so-called tunnel garages.

Door panels can be smooth, smooth with veneer or finished with a woodgrain structure. In smooth panels and in

woodgrain panels, low or high ribs can be used. Panels and profiles masking additional mounting elements can be painted in colours from the RAL palette.

*Gates with a width of more than 5500 mm or an area of more than 12.5 m² require individual pricing and consultation with a technologist.
