MRP

- Frame: extruded aluminium
- Max. width: 1700 mm
- Max. height: 2500 mm
- Max. area: 4.25 m²
- Double-leaf bypassing configuration
- Profiles painted in selected RAL or wood-effect colours

The **MRP sliding insect screen** perfectly protects all glazed balcony, terrace, and even winter garden recesses against insects. The frame, on which the insect screen is stretched, is made of solid aluminium profiles (extruded aluminium – a synonym for durability). It slides smoothly between the upper and lower guide rails, without restricting access to the protected area in any way.

The distinguishing feature of the MRP sliding insect screen is that it is the only bypassing sliding insect screen in a double-leaf configuration.

Find out more about the MRP sliding insect screen:

- frame material: extruded aluminium
- max. width: 1700 mm
- max. system width: 3200 mm (possible extension of the Z rail up to 6000 mm)
- max. height: 2000 mm
- max. area: 4.2 m²
- possibility of using specialised meshes
