

Muntin bars

Muntin bars: Adhered with duplex

- ✓ duplex widths: 20, 24, 30 mm
- ✓ duplex made of: warm or aluminium window frame
- ✓ widths of adhered muntin bars: broader than the selected duplex
- ✓ adhered muntin bars made of: PVC, aluminium, and wood (depending on the product material)
- ✓ finish for PVC and aluminium adhered muntin bars: RAL palette, veneer palette
- ✓ finish for wooden adhered muntin bars: RAL palette, transparent stain palette

Duplex muntin bars consist of two elements – external and internal. Together, they create captivating and unique windows. The external part is adhered to the glass and is broader than the internal duplex.

Standard adhered muntins are made of the same material as the window and offer all appropriate finishes. An exception is steel, for which we dedicate aluminium muntin bars.

The provided product widths refer to duplexes made of window spacer bars, either standard aluminium or warm bars, with a rich colour palette.
