- Emergency opening as standard

6400 mm	6000 mm	30 m²
Max. width	Max. height	Max. area

Rolling garage doors are a durable, economical and functional solution that will save space in your driveway and garage. Rolling garage doors are also perfect for rooms with a low lintel. The construction of the rolling garage door is similar to the adaptive roller shutter, the armor is an aluminum profile filled with polyurethane foam, rolled up on a roller tube, so you do not have to worry about the depth of the room, as in the case of sectional garage doors.
