

# SEZ-RC

- ✓ manufacturer: Selve
- ✓ "Plug&Play" drive – no adjustment required
- ✓ control: wireless
- ✓ Commeo and Iveo technology
- ✓ limit switches: electronic
- ✓ end-position adjustment: automatic
- ✓ obstacle detection
- ✓ ice detection
- ✓ response to gusts of wind

Designed for use with screen blinds, the SEZ-RC radio drive is a user-friendly solution that provides a very high level of safety. Its additional functions ensure the detection and appropriate response to hazards that could lead to damage to the fabric or the entire blind.

## Why the SEZ-RC drive is a worthwhile choice:

- it is a plug&play drive, which means it is ready for use almost immediately after installation
- it has a sensitive obstacle detection function during downward movement, which allows it to effectively react to elements blocking the blind
- it works with the SELVE Home Server, a smart home hub that enables advanced automation of the window covering's operation

## Choose the SEZ-RC drive if your client:

- values the drive's smooth operation and expects precise closing of the fabric into the cassette
- doesn't want to worry about icing, which the SEZ-RC detects independently and stops the blind's movement - there's no need to check if the blind has frozen
- expects durability and a consistently perfect appearance of the blind fabric, which the SEZ-RC protects by gently

loosening it at the upper end point

## Learn more about the SEZ-RC drive:

- rated voltage: 230 V AC/50 Hz
- power consumption during operation: depending on the drive version
- power consumption in standby mode: 0.5 W
- continuous operating time: 4 min
- frequency: 868.1 MHz and 868.3 MHz
- max. signal power: 10 mW
- signal range in open area: 350 m
- soft start and stop function
- automatic fabric tension control function
- ice detection function
- obstacle detection function
- material protection function in strong gusts of wind
- protection rating: IP 44
